

SAVEETHA SCHOOL OF ENGINEERING SAVEETHA INSTITUTE OF MEDICAL AND TECHNICAL SCIENCES

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

NAME: LOCHANA SRI R S

SLOT : B

REG. NO: 192521348

COURSE: JAVA PROGRAMMING

CODE: CSA0915

ASSIGNMENT – 1

1. Write a program to find the number of composite numbers in an array of elements.

Your Code

```
1 import java.util.Scanner;
2
3 public class Composite {
4     public static void main(String[] args) {
5         Scanner sc = new Scanner(System.in);
6
7         if (sc.hasNextLine()) {
8             String input = sc.nextLine();
9
10            input = input.replace(" ", "");
11            input = input.replace("[", "");
12            input = input.replace("]", "");
13
14            String[] tokens = input.split("\\s+");
15            int count = 0;
16
17            for (int i = 0; i < tokens.length; i++)
18            {
19                if (tokens[i].length() > 0)
20                {
21                    double num = Double.parseDouble(tokens[i]);
22
23                    if (num == (int) num)
24                    {
25                        int checkNum = (int) num;
26
27                        if (checkNum > 3)
28                        {
29                            int factors = 0;
30
31                            for (int j = 2; j <= checkNum; j++)
32                            {
33                                if (checkNum % j == 0)
34                                {
35                                    factors = factors + 1;
36                                }
37                            }
38
39                            if (factors > 0)
40                            {
41                                count = count + 1;
42                            }
43                        }
44                    }
45                }
46            }
47
48            System.out.println("Number of Composite Numbers = " + count);
49        }
50    }
51 }
52
```

Run Save

Input

7
20,28,37,26,33,31,29

Output

Number of Composite numbers = 5

Visible Test Cases

Test Case 1 ☐

Test Case 2 ☐

Test Case 3 ☐

2. Write a program to print the numbers from M to N by skipping K numbers in between.

Sample: M=50 N=100 K=7

Your Code

```
1 import java.util.*;
2
3 class Skip_Numbers
4 {
5     public static void main(String[] args)
6     {
7         Scanner scanner = new Scanner(System.in);
8
9         int m = scanner.nextInt();
10        int n = scanner.nextInt();
11        int k = scanner.nextInt();
12
13        for (int i = m; i <= n; i += (k + 1))
14        {
15            System.out.print(i + " ");
16        }
17    }
18 }
19
20
```

▶ Run

3. Write a program to arrange the letters of the word alphabetically in reverse order.
Sample: MOSQUE->U S Q O M E

Your Code

```
1 import java.util.*;
2 class Reverse_order
3 {
4     public static void main(String[] args)
5     {
6         Scanner sc = new Scanner(System.in);
7         int n = sc.nextInt();
8         sc.nextLine();
9         String S = sc.nextLine();
10        int i;
11        String rev = "";
12        for( i=0; i<n; i++)
13        {
14            rev = S.charAt(i)+rev;
15        }
16        System.out.println(" "+rev);
17    }
18 }
```

4. Write a program using a choice to check string/number palindrome.

Your Code

```
1 import java.util.*;
2
3 class Palindrome
4 {
5     public static void main(String[] args)
6     {
7         Scanner sc = new Scanner(System.in);
8
9         System.out.println("1. Check String Palindrome");
10        System.out.println("2. Check Number Palindrome");
11        System.out.print("Enter your choice (1 or 2): ");
12        int choice = sc.nextInt();
13        sc.nextLine();
14
15        switch (choice)
16        {
17            case 1:
18                System.out.print("Enter a string: ");
19                String str = sc.nextLine();
20                String revStr = "";
21
22                for (int i = 0; i < str.length(); i++)
23                {
24                    revStr = str.charAt(i) + revStr;
25                }
26
27                if (str.equalsIgnoreCase(revStr))
28                {
29                    System.out.println("It is a palindrome string.");
30                }
31                else
32                {
33                    System.out.println("It is not a palindrome string.");
34                }
35            }
36        }
```

Input

2
446

Output

```
1. Check String Palindrome
2. Check Number Palindrome
Enter your choice (1 or 2): Enter a
number:
It is not a palindrome number.
```
